**Key Indicators of Demographic and Social Survey of
Likely to be Affected Households of LHEP**

| S. No. | Indicators | Unit | No. of Families | Remarks |
|--------|------------------------------------|-----------------|-----------------|--|
| 1 | Total Households | No. | 503 | Calls no comment |
| 2 | Families having Land & House | No. | 433 | Calls no comment |
| 3 | Total Population | No. | 2776 | Calls no comment |
| 4 | Family Size | No. | 5.52 | Calls for concerted efforts by Health Department in family planning |
| 5 | Sex Ratio (females per 1000 males) | No. | 904 | Needs improvement |
| 6 | Literacy | % | 78.71 | Fairy high, still has a scope of improvement |
| 7 | Workers in total population | % | 57.99 | The percentage is envisaged to decrease with increase in quality of life hence needs no comment |
| 9 | Annual income/ HH | Rs. | 49959 | Needs improvement for comfortable living |
| 10 | Share of Agriculture Income | % | 30.12 | Low share, needs attention through diversification and high value crops |
| 11 | Families below poverty line | % | 0 | Living of standard is good |
| 12 | Families having House | % | 90.46 | Needs attention |
| 13 | Avg. size of house | mt ² | 97.75 | Sufficient as per present living standards and requirements |
| 14 | Households having pucca house | % | 15.60 | Strongly correlated with level of income and this may go up as a result of expected rise in income levels as a result of LHEP activities |
| 15 | Households with separate Kitchen | % | 55.82 | Correlated with income, awareness and education level. Needs improvement |
| 16 | Households with separate Toilet | % | 36.92 | Correlated with income, awareness and education level. Needs improvement |
| 17 | Households having Business | % | 5.57 | The percentage might increase with the initiation of LHEP activities |
| 18 | Families having outstanding loan | % | 0.20 | Low, Needs no comment |

| | | | | |
|----|---------------------------------|--------|-------|---|
| 19 | Households having Shop | No. | 27 | The number might increase with the initiation of LHEP activities |
| 20 | Households having Taxi | No. | 1 | The number might increase with the initiation of LHEP activities |
| 21 | Households having General Store | No. | 13 | The number might increase with the initiation of LHEP activities |
| 22 | Households having TV | % | 67.99 | Expected to rise with increase in income |
| 23 | Households having Refrigerator | % | 30.81 | Expected to rise with increase in income |
| 24 | Households having LPG | % | 58.25 | Expected to rise with increase in income |
| 25 | Average size of land holding | Bighas | 4.67 | Calls no comment |
| 26 | Households growing Wheat | % | 89.26 | Cropping pattern needs diversification towards fruit & vegetables |
| 27 | Households growing Paddy | % | 22.86 | Cropping pattern needs diversification towards fruit & vegetables |
| 28 | Households growing Maize | % | 85.88 | Cropping pattern needs diversification towards fruit & vegetables |
| 29 | Households growing Apple | % | 10.74 | Additional area be brought under apple farming |
| 30 | Households growing Almond | % | 9.94 | sufficient |
| 31 | Crops output/ HH | Rs | 15050 | May increase with diversification of agriculture |
| 32 | Livestock/ HH | No. | 2.75 | Expected to decline |
| 33 | Milch animals/ HH | No. | 0.93 | Expected to increase |
| 34 | Monthly consumption/ HH | Rs | 2108 | May increase in monetary as well as quality terms as a result of increase in income |

Chapter – 1

INTRODUCTION

Introduction

This volume of the study pertains to the areas which are not directly affected by the Luhri Hydro Electric Project (LHEP) activities, but due to their location are likely to get some impact, positive or negative, as a result of project activities. These areas have been termed as 'likely to be affected areas' and the households located in such areas or villages have been termed as likely to be affected households. Such households are located within a distance of half kilometer from the alignment of HRT. It has been envisaged that such households might be affected to a very limited extent because of blasting in the tunnel which might result in cracks in the houses or due to indirect impacts as on the water resources etc. The present survey is concerned with highlighting the existing socioeconomic conditions of the population which is likely to be affected. The results of presents a study are envisaged to form benchmark with which the socioeconomic conditions of the likely to be affected population can be compared to have evaluation of impact of project activities on different aspects of living conditions..

Methodology

The quantification of different parameters pertaining to socioeconomic conditions of Likely to be Affected Families required comprehensive data collection, both primary which was collected from the households directly and secondary data of the concerned villages which has been collected from various secondary sources like village level revenue officials etc. The data was collected on pre-structured schedules with personal interview method by the team of experienced and trained research investigators. The likely to be affected families were located in the villages like Tundal, Choa, Mamli etc. The village-wise details of the project affected villages and the sample surveyed have been presented in table 1.1.

Reference Period

The filed investigation for the study was completed in four phases spanning over the months of December 2007 to April 2007. The data collected from the households pertains to agricultural year 2005-06.

Limitations of the Study

Despite the best efforts and care during the data collection, the study may suffer from following limitations.

1. Certain households were apprehensive of field investigation teams and did not cooperate in the process of data collection.
2. The data collected could not be cross checked to do to about fact. Although all care was taken, to the data may have certain inconsistencies.
3. Some of the families have moved out and data on certain aspects could not be ascertained from the fellow villagers.

Table: 1.1 Caste-wise detail of Likely affected households

| S. No. | District | Tehsil | Village | Target Area | Total Households | SC | ST | OBC | GENERAL |
|--------|----------|---------|----------------|---|------------------|----|----|-----|---------|
| 1 | Mandi | Karsog | Tundal | Alignment of H.R.T. Dam, Intake and Desilting | 35 | 2 | - | - | 33 |

**The one General schedule belongs to Village Devta*

Chapter – 2

GENERAL FEATURES OF PROJECT AFFECTED VILLAGES

The general features of the villages among the likely to be affected area of the project have been presented in the present chapter. All the 29 individual villages lying in the likely to be affected area have been taken into account and the infrastructural facilities have been presented individually for each of the village. In addition to this, the general features include the socioeconomic features, and indicators related to agriculture like operational holdings, cropping pattern and land use pattern etc. The following text presents the details.

Infrastructural Facilities

There are many infrastructural facilities present in the village whereas some of these facilities are to be found in the nearby areas. Table 2.1 presents the details of such facilities which are present in the village or in the nearby villages for areas. The table presents such details for 29 villages. The facilities included are the block and district headquarters, railway station, bus stop, market, schools, bank and post offices and various other infrastructure facilities. A cursory look at the table reveals that most of the facilities are not provided in the village itself but the persons have to travel some distance in order to obtain such facilities. The village-wise details can be referred from this table.

Socioeconomic features

The social and features of the selected villages have been presented in table 2.2 and the analysis has been based on 2,001 census data and other latest relevant records. The analysis indicates that the number of households in each village varied between 1 in Majel Having a population of 6 persons and as high as 97 in the village Nanj with a total population of 510 persons, indicating large variability in this respect. The table also separately presents the population of male, female and also of children below the age of six years. The highest sex ratio of 2273 was found in village Bai whereas the least in this respect was found in village Jagirth where there were only 789 females for every thousand males. Highest percentage of literates was 100 percent in village Majel and the lowest

percentage in this respect was in village Sarahal where only 59.7 percent of persons were literates. The table further presents the details of schedule caste and schedule tribe population along with the number of families under various development programs like IRDP, IAY and SJRY etc.

Occupational Structure

The results of analysis of the occupational structure of the residents of select villages has been presented in table 2.3 indicating that the highest number of total workers were to be found in village Nanj having 312 total workers and the least in this respect was in village Sakrawa where there were only 2 workers in total. The village Nanj also had highest number of main workers totaling 218 and least in this respect was village Sakrawa with only 1 main worker. In village Nanj there were 271 cultivators being the highest. Village Sakrawa had the least number of cultivators, only 1. The table also presents the details of marginal workers and no workers.

Operational holdings

The village-wise details of operational holdings in the selected villages, based on the revenue records of respective villages have been presented in the table 2.4 depicting that that highest number of operational holdings, 646 covering an area of 478 hectares, was in villages Gothana, kalog Rapai, Shihn, Garoli, Dhar, Dhand, Chhachpal, Socha and Bhutti taken together, the data for individual villages was not available. Among the villages for which the data was individually available highest number of holdings was in village Nanj having 64 holdings spread over the area of about 51 hectares. In addition to this, the table also presents the details of number of holdings and area covered by marginal, small, medium and large holdings in the villages.

Land Utilization Pattern

The analysis of land utilization pattern of the select villages indicates that the village Dutt Parali is the largest having 251.26 hectares of total geographical area, the smallest in this respect have been villages Punchwi and hagerh having 8 hectares of total geographical area each (Table 2.5). Among the group of villages, for which the data was jointly available, a group of 10 villages comprising of Soanch and Bhutti etc had the highest area of 564 hectares. The analysis further indicates that forests were present only in 7 villages like Nanj (103 ha), Choa (50ha) and Mamli (68 ha) etc. The table also presents the details of

other land use categories like land put to non-agricultural uses, barren land, pasture and grazing lands, fallow land etc. Most important from agricultural point of view is the total cropped area. The table presents the details of net area sown and area sown more than once. The analysis indicates that the highest cropped area was in village Nanj having 88 hectares whereas the lowest in this respect were villages Punchwi and Jagerh with 14 hectares each. The villages Punchwi, Baghiri and Jagerh registered the highest cropping intensity of 200 percent. Khegsu, bae, Tho and Soidhar were the villages with lowest cropping intensity of only 112 percent. The table also provides the details of level of irrigation in selected villages.

Cropping Pattern

The results of analysis pertaining to go cropping pattern, which indicates the extent of cultivation of various crops has been presented in table 2.6. The table presents the extent of the area under various crops under irrigated and un-irrigated conditions and for kharif and rabi seasons. It may be observed that maize was the most important kharif crop and wheat the rabi crop in the sampled villages. The details of area under individual crops in different villages under irrigated and unirrigated conditions can be referred to from the table.

Sources of irrigation

It is important to study the extent of area irrigated and the sources of irrigation. The analysis indicates (Table-2.7) if that in majority of the villages there was complete absence of irrigation facilities. Irrigation was available only in villages like Nanj having 3 kuhl and Dateha with 1 kuhl. Irrigation was also available in villages like Soancha and Bhutti etc. The only source of the irrigation was kuhl. The table also presents the extent of change in the irrigated area over the last 5 years but no change in this respect has been reported.

Credit facilities

If the residents of the selected village were availing all types of loans and such loans were taken either from banks or the village money lenders, table 2.8 presents the details. The villagers were taking all time for loans which are forwarded by the banks and the rate of interest for such loans varied from 7 to 14.5 percent. However, these loans are supposed to be utilized for production activities. But the loans taken from village money lenders could be used for any purpose, consumption or farm production. But these loans are forwarded at

exorbitant interest rates varying from 24 to 36 per cent per annum. The villagers were reported not to be taking loans from traders or relatives.

Sources of Agricultural Inputs

The sources of different agricultural inputs like seeds, fertilizers, implements and machinery, insecticides and pesticides etc in the selected Villages have been presented in table 2.9. The table also presents the distance of the input sources from the villages. It is observed that the source of seed is either Block office or the private shops. The distance varied from zero kilometers to about 45km in case of villages like Manju and Parali etc.. The source of fertilizer is private traders and the distance of these agencies varied from zero to 15 kilometers. The source of insecticides and pesticides and farm implements etc. was also the block office and private traders.

Economic Resources

The economic resources of the village include tractors, trolleys, and threshers etc, table 2.10 presents the details. But it was observed that the only economic resources present in the villages were the threshers. None of the villages had any other listed economic resources. Threshers were present in 10 villages and village Dhand had 10 threshers.

Livestock Resources

The livestock resources present in the village have been presented in table 2.11. The livestock resources include draught animals, cows, buffaloes, sheep and goat and poultry etc.. The table reveals that highest number of livestock was present in village Sihan, where it totaled 2395 and the least in this respect were villages Majhel and Sakrawa where only 4 heads of livestock were present. The village-wise details can also be referred from this table.

CHAPTER – 3

PROFILE OF INDIRECTLY AFFECTED HOUSEHOLDS

The profiles of project affected villages have been presented separately for each village. It includes the details of demography like the total population, social status of the population, family size, marital status, workers and non workers among the population, literacy level etc. The analysis also takes into account the commercial assets and income generated from such assets. The details of agricultural land, cropping and production pattern are also the part of profile. The analysis also takes into consideration the modern durables and their value for the families living in project affected villages. The detailed consumption pattern is also the part of the profile of the project affected households.

3.1 General Information

The general information of the villages where the households which are likely to be affected from the project activities includes the social status of the house holds like whether these belong to SC, ST or OBC categories or belong to general category. The details have been presented in tables 3.1.1 to 3.29.1 for the villages under consideration. These tables also provide the details of the religion of the population. The social classification of the households is important due to differential treatment of such categories and the special programmes designed for their upliftment. This calls for detailed analysis based on this aspect. The details may be referred to from the tables.

3.2 Assets in Possession

There are various types of households classified on the fact of ownership of assets like land, house and shop etc. In present study seven such classes have been formed on the basis of combination of ownership of assets. Some of the households have only land or house or shop and some others may have more than one of these assets. The

analysis takes in to consideration the number who have land and house, shop and land, house and shop and land, house and shop, all three. The analysis of ownership structure may have linkages with the compensation package which has to be based on the assets of the affected population. These details have been presented in tables 3.1.2 to 3.29.2 for 29 selected villages

3.3 Demographic profile

The demographic profile of the sampled villages includes the total population and the important demographic indicators like average family size and sex ratio and etc. The details for different villages have been presented in tables 3.1.3 to 3.29.3 for the selected villages. The tables also present the details of marital status of the population.

3.4 Educational Status

The educational level of the population is important indicator for deciding the availability of trained and receptive man power. The analysis in this respect presents the percentage of population which had passed various level of formal education and also any professional qualification which they might have acquired. The details of the analysis have been presented in tables 3.1.4 to 3.29.4 for all the selected villages.

3.5 Literacy Level

In addition to the formal education, the literacy level is helpful in judging the awareness level of the population. The estimates of literacy level have been presented in tables 3.1.5 to 3.29.5. The analysis also highlights the literacy level of different social groups.

3.6 Workers Population

Tables 3.1.6 to 3.29.6 indicate the distribution of workers and non-workers among total population. On the basis of this analysis the dependency ratio has been worked out indicating the number of persons dependent upon each worker for sustenance and presented in the same table.

3.7 Occupational Pattern

Although agriculture is the main occupation of rural people, there are various other vocations adopted as main or subsidiary occupations adopted and these may or may not be agricultural based. It has been observed that in addition to agriculture, business and service are to main other occupations among the sampled households. Some people are also engaged in agriculture or non-agriculture labour and a few others are rural artisans. The tables 3.1.7 to 3.29.7 present the details of occupations pattern for the sampled households.

3.8 Sources of Income

As there are different occupations, the households have multiple sources of income. The details of income derived from different sources by the selected households have been presented in tables 3.1.8 to 3.29.8.

3.9 Annual Income of Households

The income derived from different sources for the selected households have been presented in tables 3.1.9 to 3.29.9. The analysis highlights the share of different sources like service, agriculture, business and labour etc. in the total household incomes of the sampled households.

3.10 Families Below Poverty Line

The analysis indicates that there are very few households living below the poverty line in the selected villages. But even the insignificant number of such families living below the poverty lines have to be given due importance for alleviation from the clutches of poverty. Tables 3.1.10 to 3.29.10 present the details of families living below poverty line in different selected villages.

3.11 Particulars of Houses

The type of houses in position of families is an important indicators for determining they are living standards and social status. The size of house is also important in this respect it is with this back ground that the houses have been classified in to Pucca, Kaccha and semi-pucca houses. In addition to this it has also been analyzed that whether these houses have separate kitchen, toilet, and animal shed or not, tables 3.1.11 to 3.29.11 present the details.

3.12 Business Details

The business details included in the analysis are the number of households which are running some sort of business and the initial investment in establishing the business. The analysis has been extended to cover the loan component for business establishment and the families which had outstanding loan at the time the survey was conducted and the source of such loans etc. Tables 3.1.12 to 3.29.12 present the details.

3.13 particulars of Shop

The general observation is that in majority of cases, business and shops are considered to be synonymous with the shop. It is because of this experience that the shops have been separately analysis. The indicators under evaluation are the area of the shop, investment and type of shop for example general store or provision store or any other type of the shop which my prepare. The details can be referred from tables 3.1.13 to 3.29.13.

3.14 Impact of LHEP Activities

It is envisaged that the project activities will have some impact on the business due to influx of population, infrastructural development etc. The impact of project activities on the business might be of particular interest to LHEP authorities. The analysis in this

respect includes the percentage of business households who perceive impact of the business and whether this impact is anticipated to be positive or negative, tables 3.1.14 to 3.29.14 present the details.

3.15 Households Having Commercial Assets

In addition to shops many families have other commercial assets like taxi, truck etc. The percentage of households who own such assets and also the shops etc. have been presented in tables 3.1.15 to 3.29.15 and details may be referred from these tables. The number of commercial assets is another consideration and number of such assets have been presented in tables 3.1.16 to 3.29.16.

3.16 Monthly Income from Commercial Assets

Average monthly income from the commercial activities has been presented in Tables 3.1.17 to 3.29.17 indicating that monthly income generated from such assets ranged between Rs. 500 from Photostat to Rs. 15,000 from restaurant.

3.17 Modern Durables

The analysis of modern durables has been split in to three parts, number of households having different types of modern durables, number of modern durables with the families and finally the value of these modern durables. The details of number of households which have acquired different types of modern durables has been presented in tables 3.1.18 to 3.29.18. Total number of modern durables, as there might be more than one such durables and these details have been presented in tables 3.1.19 to 3.29.19. The quality of modern durables is usually judged by its value and hence becomes an indicator for differentiation of quality of durables. The value of modern durables owned has been presented in tables 3.1.20 to 3.29.20.

3.18 Land Resources

Land is the primary production resource and its quality and extent largely determining the land use and cropping patterns which ultimately determining the income level from this resource. In the present analysis the total land comprising of area under agriculture and horticulture and also grass land and waste land have been quantified. The status of irrigation is part of this analysis. The details from tables 3.1.21 to 3.29.21

3.19 Cropping and Production pattern

The tables 3.1.22 to 3.29.22 present the details of number of families growing different crops. The quantification of number of families growing different crops is important as all the farmer do not adopt the identical cropping pattern. The actual cropping pattern has been presented in tables 3.1.23 to 3.29.23 high lighting the crops grown and area under these crops. The result and production pattern has been highlighted in tables 3.1.24.to 3.29.24. The analysis have been further extended to find out the value of crop output among the effected households in the selected villages and the results have been presented in tables 3.1.25 to 3.29.25.

3.20 Livestock Resources

Draught animals, milch animals and sheep/goat are the important livestock found in the project area. Different households preferred to rear different type of livestock for economic or resource ability reasons. The number of households rearing different types of livestock has been presented in tables 3.1.26 to 3.29.26. The number of livestock owned by the families has been presented in tables 3.1.27 to 3.29.27 and the value of the livestock holding has been presented in tables 3.1.28 to 3.29.28. Further, the proportion of crossbred livestock is a positive aspect and has been analysis in tables 3.1.29 to 3.29.29.

3.21 Consumption Pattern

The number of families in the village consuming various food and non-food articles has been presented in tables 3.1.30 to 3.29.30. The quantities of various articles consumed have been presented in tables 3.1.31 to 3.29.31. The actual consumption expenditure has been presented in tables 3.1.32 to 3.29.32.

3.22 Prevalence of Diseases

The analysis of common and chronic deceases have been presented in tables 3.1.33 to 3.29.33 in respect of adult and children during the last one year.
